Saam groei ons sterker

Dit is moeilik om te glo dat ons reeds in Julie is. Regoor die land is baie van ons boere besig met die oes, en ons vertrou dat die seisoen vir almal produktief en voorspoedig sal wees. Ons wens al ons landbougemeenskappe 'n veilige en suksesvolle oesseisoen toe.

Growing stronger together

It is hard to believe that we are already in July. Across the country, many of our farmers are busy harvesting, and we trust that the season will be both productive and rewarding. We wish all our farming communities a safe and successful harvest.

NUUT @ Falcon!!

Die **Falcon F1000 Round Bale Grab** is die nuutste toevoeging tot ons reeks produkte vir materiaalhantering. Dit is 'n robuuste en betroubare hanteringstoestel wat ontwerp is vir die veilige verskuiving van ronde bale met 'n gewig van tot **1000 kg**. Dit is gebou vir veeleisende landboutoestande en bied boere en kontrakteurs 'n doeltreffende oplossing vir die laai, vervoer, stapel en voer van hooi of kuilvoer bale, terwyl skade aan die baalplastiek tot die minimum beperk word en die kwaliteit van die voer behoue bly.

Die **F1000** is ontwerp vir sterkte en veelsydigheid en kan aan verskeie voorlaaiers en teleskopiese hysers gemonteer word. Dit is ook versoenbaar met die **Falcon F1000 Uniloader**, wat dit 'n uitstekende toevoeging maak tot enige onderneming waar ronde bale hanteer word.

Die gryp se sorgvuldig ontwerpte arms bied 'n stewige greep rondom die baal sonder oormatige druk, wat die risiko verminder dat die plastiek skeur of die baal se struktuur versteur word. Dit is intern ontwerp en ontwikkel met Afrika toestande in gedagte, en is gebou om die uitdagings van daaglikse gebruik te weerstaan. Onderdele is ook gereedlik beskikbaar wanneer dit benodig word.

Of dit nou gebruik word om bale vanaf die land te verskuif, in stoorfasiliteite te stapel, of na veevoerareas te vervoer, lewer die **F1000 Round Bale Grab** betroubare werkverrigting, keer op keer.

NEW @ Falcon!!

The **Falcon F1000 Round Bale Grab** is our latest addition to our product handling range. It is a robust and reliable handling attachment designed for the safe movement of round bales weighing up to **1000 kg**. Built for demanding agricultural environments, it provides farmers and contractors with an efficient solution for loading, transporting, stacking, and feeding hay or silage bales while minimizing damage to the bale wrap and preserving forage quality.

Engineered for strength and versatility, the **F1000** can be fitted to various front-end loaders and telehandlers. It is also compatible with the **Falcon F1000 Uniloader** making it an excellent addition to any operation where round bales are handled.

The grab's carefully designed arms provide a secure grip around the bale without excessive compression, reducing the risk of tearing plastic wrap or disturbing the bale's structure. Designed and developed in-house with African conditions in mind, it is built to withstand the rigours of daily use and spare parts are readily available as needed.

Whether moving bales from the field, stacking them in storage, or transporting them to livestock feeding areas, the **Falcon F1000 Round Bale Grab** delivers dependable performance time and time again.

Precision Spraying Reimagined with ContourControl, Flex Folding II and Hydraulic Pump Drive

Modern crop protection requires precision, efficiency and flexibility. The Amazone UF 1602 and UF 2002 mounted sprayers, equipped with ContourControl boom guidance, Flex Folding II technology and the optional hydraulic pump drive, deliver advanced spraying performance for today's farming operations.

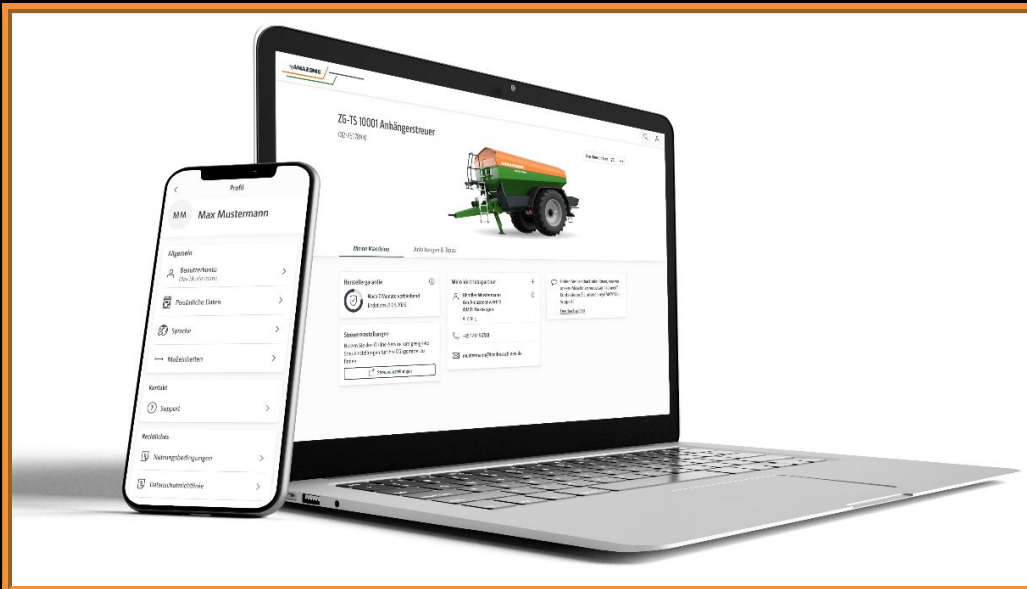

Combined with the FT front tank system, the UF 02 offers a total spray capacity of up to 3,500 litres while maintaining the compact manoeuvrability of a mounted sprayer. Its lower overall weight also reduces soil compaction and allows operators to enter fields sooner during wet conditions, maximising valuable spraying opportunities.

ContourControl, available on working widths from 20 to 30 metres, actively maintains the correct boom height using pre pressurised hydraulic cylinders and fast responding valves. The system continuously follows uneven terrain, ensuring accurate product placement across the full boom width while reducing spray drift and improving application quality. Farmers can therefore work at higher speeds without sacrificing precision.

Flex Folding II further improves efficiency through fast folding and simple working width adjustment. Integrated break back protection enhances durability in demanding conditions, while the system is ready for future technologies such as band and spot application.

The optional hydraulic pump drive operates independently of tractor engine speed through the sprayer's load sensing hydraulic system. This protects the pump from overspeeding while delivering consistent spraying performance under varying field conditions. Operators also benefit from easier coupling, improved fuel efficiency and maintenance free operation.

Together, these innovations enable the Amazone UF 02 and FT front tank combination to deliver boom guidance technology previously associated with larger self propelled sprayers, providing exceptional accuracy, productivity and flexibility in a lightweight package for modern agriculture.

myAMAZONE Relaunch Delivers Smarter Digital Support

AMAZONE has introduced a redesigned version of its **myAMAZONE** customer portal, offering farmers and equipment owners an improved digital experience with faster access to essential machine information and support.

The updated platform features a cleaner layout, simplified navigation and an enhanced search function, making it easier to locate operator manuals, spare parts lists and smart learning videos. By bringing machine information, service details and warranty status together in one place, myAMAZONE helps users save time and work more efficiently.

One of the portal's key benefits is individual machine registration. Registered users receive valuable advantages, including a two year manufacturer warranty, extended rust perforation cover on selected fertiliser spreaders, and an additional two year warranty on AmaSwitch Plus. Customers also gain access to machine specific documentation and training resources while being automatically connected to their local AMAZONE sales partner for ongoing support.

Available in more than 20 languages, the new myAMAZONE demonstrates AMAZONE's continued investment in digital services that simplify daily farming operations. As the platform continues to evolve, even more smart features will be introduced to improve efficiency and make machine ownership easier than ever before.
